CMLRE-CR(CI)

Dear Sir:

The Chemical and Radiological Laboratories of the Chemical Corps will conduct a symposium on Incendiary Gels and their Instrumentation at the Army Chemical Center on 27-28 June 1955. This is the seventh of a series of symposia on various topics. The symposium will be held in an air-conditioned theatre with a seating capacity of about 350.

The manufacture and chemical nature of thickeners were discussed at Symposium VI in June 1954, part of which was unclassified. At the coming symposium, attention will be focussed on the physics of the gel systems in an attempt to clarify the theoretical considerations leading to improved instruments with which to measure the gel properties. The Symposium will be unclassified.

Since the meeting will involve material of military interest, and will be held at an Army installation, participation will be restricted to American citizens.

A copy of the program is inclosed. A reply to this invitation within two weeks will be appreciated with return of the information requested on the inclosed questionnaire. A franked envelope is inclosed for your convenience.

Details on train schedules, housing arrangements, etc. will be supplied later to those who indicate a desire to attend, and to whom invitations have been issued. We are sending this letter to a rather large number of research personnel working in this field. However, we shall be glad to hear from you if you have suggestions on scientists whom

you recommend that we do not overlook. Your suggestions will be checked against our mailing list and will receive every consideration.

Very truly yours,

  
R. MACY, Chairman  
Symposium VII
